SARASOTA, Fla. -- HybridNRG was selected as one Florida's best 15 early-stage business prospects for 2009 and presented its Wireless Integrated Renewable Energy System (WIRESSM) model at the Florida Venture Forum in Orlando on May 15.

A Florida Woman Owned Business designed to provide green energy alternatives, HybridNRG was picked from among 200 or so other companies to participate in the Forum's prestigious Early Stage Venture Capital Conference. The presentation was made to an audience of venture capitalists, private equity investors, angel investors, investment bankers, financial intermediaries and entrepreneurs.

"To be selected as a finalist from so many other companies, and being the only woman-owned business invited, was a huge inspiration for us," said Jaclyn Toale, the CEO and co-founder of HybridNRG. "We are extremely passionate about our business, and to have an opportunity to speak to such a group of investors and entrepreneurs was encouraging and motivating. The value was immeasurable; we have already had several follow-ups from investment groups and brokers."

Subsequently, HybridNRG also was invited to present the week of June 1 at New World Angels, a group based in Boca Raton, Fla.

About HybridNRG

HybridNRG has developed WIRESSM for onsite energy generation to support wireless communication sites such as cell phone towers and provide their back-up power requirements. The company utilizes leading edge technologies to provide clean and green energy for its customers. Typical system components include solar panels, small wind generators, inverters, batteries and fuel cells.
